

Please note that XM Radio provides a very valuable consumer service. Due to their coverage, it is safer for me to tune into one channel across country, rather than fiddling with the radio trying to catch a station. I am a truck driver with my husband and it really helps in traffic congestion, construction, and weather conditions to be able to pick up this information even before I get to an area to plan my route thru these problem areas. Often by the time you pick up the station on AM/FM it is too late to avoid the backup. XM Radio has been a god-send to the traveler. It is a shame that an organization as NAB feels so threatened. They should applaud the service provided can benefit everyone. Congress should attack terrorism and the economy and leave the freedom of choice to its citizens. Please make note of my voice against the bill HR4026 and allow each the choice of preferred communication. Thank you for your openness to our opinions.
